الصباحي

A

1) Find the vector which have eight elements such that the first element 7 and the last element 28
2) Find the value of x^5+4x^4-6x^3+8x^2-2x+3 at x = 1
3) Find sub matrix of row third and columns first , second from matrix of size 3*5

B

1) Find the vector which the first element 5 and the last element 20 such that the difference between each two elements 3
2) Find the roots of x^6-6x^5+3x^4-8x^3+2x^2+5x-4
3) Find the lower triangular matrix

C

1) Find the vector which have ten elements such that the first element 4 and the last element 18
2) Find the polynomial of the roots 5 , -3, 8 ,9
3) Find a matrix of size 9*2 from matrix of size 3*6

D

1) Find the vector which the first element 4 and the last element 34 such that the difference between each two elements 5
2) Find the value of x^6-9x^5+4x^4+3x^3+5x^2-2x-6 at x = 5
Find upper triangular matrix

E

1) Find the vector which have nine elements such that the
first element 2 and the last element 22
2) Find the roots of x^7-6x^6+5x^5-8x^4-7x^3+3x^2+2x-4
3) Find sub matrix of row first and columns second , third from matrix of size 4*6

F

1) Find the vector which the first element 3 and the last element 26 such that the difference between each two elements 4

2) Find the polynomial of the roots 4 , 7, 2 ,-6, 3
Find the lower triangular matrix

G

1) Find the vector which have twelve elements such that the
first element 5 and the last element 30
2/Find the value of x^6-8x^5+3x^4+2x^3+9x^2-4x-2 at x = 2
3) Find a matrix of size 6*2 from matrix of size 3*4

H

1) Find the vector which the first element 8 and the last element 36 such that the difference between each two elements 4
2) Find the roots of x^7-4x^6+8x^5-2x^4-9x^3+6x^2+4x-2
3) Find upper triangular matrix
